

Anna Ermilina

Senior Frontend Engineer | React & Next.js

Belgrade, Serbia | +381 643 506 117 | anna.ermilina@gmail.com
aermilina.github.io | linkedin.com/in/aermilina

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 7+ years of experience in the React ecosystem, Next.js, and mobile-first web applications. Experienced in architecting scalable frontend systems, optimizing Core Web Vitals, and leading large-scale platform migrations. Uses AI-assisted development tools (Cursor, Claude, Gemini) to speed up implementation and reduce time spent researching solutions.

TECHNICAL SKILLS

- **Frontend & Mobile:** React, Next.js (App/Pages Router), TypeScript, JavaScript (ES6+), Vite, Mobile-First Architecture
- **State & Data Management:** Redux Toolkit, Redux, TanStack Query, Context API, REST APIs
- **UI/UX & Design Systems:** SCSS, Tailwind CSS, Material UI (MUI), Styled Components, Figma, Storybook
- **Forms & Validation:** React Hook Form, Yup
- **Auth & Integration:** Keycloak, REST API design and integration, third-party API integrations
- **Performance & SEO:** Core Web Vitals optimization (LCP, FID, CLS), SSR/SSG rendering strategies, schema.org structured data (JSON-LD)
- **Engineering & DevOps:** CI/CD (GitHub Actions), Git, Docker, Jest, React Testing Library, Agile/Scrum
- **AI Automation:** Cursor, Claude, Gemini, Prompt Engineering, AI-assisted development pipelines

PROFESSIONAL EXPERIENCE

Senior Frontend Developer — Full-Time | OOO "Za Rulem", Moscow / Remote

2019 – Present

- Co-migrated two legacy sites (previously built on Google Closure and a separate Node.js/jQuery mobile site) to React and Redux; later became the sole frontend developer on the project and independently led the migration to Next.js, building a component library of 76+ reusable React components alongside page templates, routing, and metadata handling.
- Independently drove SSR performance optimization, coordinating with backend engineers to reduce data payloads — achieving a Lighthouse Performance score of 95/100 (green zone) with zero Cumulative Layout Shift and a 2.4s Largest Contentful Paint, tested under throttled slow 4G conditions.
- Customized Keycloak authentication: deployed a local admin instance via Docker, configured the login flow and theme variables, and delivered a custom login theme for DevOps to integrate into production.
- Implemented schema.org structured data (JSON-LD) in Next.js App Router to improve search engine and LLM content understanding, and separated global layout data fetching from page-level content fetching to reduce redundant requests and improve caching.

Frontend Developer — Contract | OOO KP-IT, Moscow / Remote

2024 – Present

- **Statistics Dashboard:** Built the frontend for an internal analytics dashboard, including data visualization modules and multi-step forms with client-side validation (Yup).
- **Digital Library:** Developed a touch-optimized kiosk application (client-side rendered), focused on smooth performance and high-quality image rendering.
- **Coupon Hub:** Built the frontend for a user-acquisition marketing campaign using server-side rendering (SSR), coordinating with a backend developer on integration.

EDUCATION & CERTIFICATIONS

- **Engineer, Faculty of Radio-Electronics of Aircraft** — Moscow Aviation Institute (MAI), 2005 – 2011
- **Linguist-Translator, Institute of Foreign Languages** — Moscow Aviation Institute (MAI), 2008 – 2011
- Google AI Essentials Certificate (AI-Augmented Development Workflow & Automation)
- Meta Front-End Professional Certificate (Advanced React Architecture)

LANGUAGES

- **Russian:** Native
- **English:** Upper-Intermediate (B2)
